Demand-Driven Associative Classification (SpringerBriefs in Computer Science) Adriano Veloso, Meira Jr.

The ultimate goal of machines is to help humans to solve problems.
Such problems range between two extremes: structured problems for which the solution is totally defined (and thus are easily programmed by humans), and random problems for which the solution is completely undefined (and thus cannot be programmed). Problems in the vast middle ground have solutions that cannot be well defined and are, thus, inherently hard to program. Machine Learning is the way to handle this vast middle ground, so that many tedious and difficult hand-coding tasks would be replaced by automatic learning methods. There are several machine learning tasks, and this work is focused on a major one, which is known as classification. Some classification problems are hard to solve, but we show that they can be decomposed into much simpler sub-problems. We also show that independently solving these sub-problems by taking into account their particular demands, often leads to improved classification performance.

From reader reviews:

Carl Yeates:

This book untitled Demand-Driven Associative Classification (SpringerBriefs in Computer Science) to be one of several books in which best seller in this year, that is because when you read this guide you can get a lot of benefit onto it. You will easily to buy that book in the book retail outlet or you can order it via online. The publisher in this book sells the e-book too. It makes you quickly to read this book, because you can read this book in your Cell phone. So there is no reason to you personally to past this e-book from your list.

Elizabeth Talbot:

The book Demand-Driven Associative Classification (SpringerBriefs in Computer Science) has a lot of information on it. So when you check out this book you can get a lot of benefit. The book was written by the very famous author. Mcdougal makes some research before write this book. This particular book very easy to read you can find the point easily after reading this article book.

Steven Jones:

The book untitled Demand-Driven Associative Classification (SpringerBriefs in Computer Science) contain a lot of information on the idea. The writer explains her idea with easy means. The language is very clear and understandable all the people, so do not really worry, you can easy to read the idea. The book was published by famous author. The author will bring you in the new age of literary works. You can actually read this book because you can read on your smart phone, or gadget, so you can read the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can available their official web-site and also order it. Have a nice examine.

Rebecca Bonnett:

Reading a book make you to get more knowledge from this. You can take knowledge and information from the book. Book is created or printed or highlighted from each source that will filled update of news. In this modern era like right now, many ways to get information are available for you. From media social just like newspaper, magazines, science e-book, encyclopedia, reference book, book and comic. You can add your understanding by that book. Ready to spend your spare time to open your book? Or just seeking the Demand-Driven Associative Classification (SpringerBriefs in Computer Science) when you desired it?
