## Highway of Dreams: A Critical View Along the Information Superhighway (LEA Telecommunications Series) A. Michael Noll

This important volume reviews the history of the telecommunication superhighway pointing out its beginnings in the interactive TV and broadband highway of the wired cities more than two decades ago. It explains the technological uncertainties of the superhighway and many of its futuristic services, and also gives an understandable review of the technological principles behind today's modern telecommunication networks and systems.

Recognizing that technology is only one factor in shaping the future, the author, a well-recognized telecommunications expert, analyzes the financial, policy, business, and consumer issues that undermine the superhighway. The book concludes by showing that today's switched telephone network and CATV systems already form a telecommunication superhighway carrying voice, data, image, and video communication for a wide variety of services that enable us to stay in contact with anyone anywhere on our planet.

*Highway of Dreams* is written clearly with understandable explanations for nonspecialists. It challenges the technological utopia offered by the promoters of the superhighway and suggests that consumer needs, finance, corporate culture, and policy often have far greater impact on the future than technology alone.
